---

## FRONTEND DEVELOPER

Software Developer with over 3 years of experience building and optimizing scalable web applications and cross-platform solutions. Strong expertise in JavaScript/TypeScript ecosystems, including React, Next.js, and Angular. Experienced in designing clean UI architectures, integrating RESTful APIs, and improving performance. A proactive team player with strong problem-solving skills and a continuous learning mindset.

---

## KEY COMPETENCIES

**Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3/SCSS

**Frameworks & Libraries:** React 18/19 (Context API, Hooks), Next.js, TanStack Query (React Query)

**UI & Styling:** TailwindCSS, Material UI, Shadcn/ui, Bootstrap

**Security & Authentication:** MSAL (Azure AD), JWT Session Sync, Secure HTTP-only Cookie Strategies

**Tools & Platforms:** AWS (S3, Cloud Practitioner), Docker, Socket.IO, Github, Postman

---

## EXPERIENCE

**DXC Technology Viet Nam**

**Feb 2022 - Oct 2024**

**Project:**

**Modernize UI/UX (2/2022 - 2/2023)**

**Pathfinder (2/2023 - 10/2024)**

**Team size:** 12

**Responsibility:** Front-end developer

**Tech stack:** Angular, HTML, SCSS, Typescript, Jira, Marvelapp, TortoiseGit, Postman

- Developed and maintained highly reusable Angular components for efficient UI development
- Implemented robust CRUD operations for multiple transaction
- **Optimized application performance** by implementing lazy loading, code splitting, and aggressive image compression, resulting in a **50% reduction** in initial load time
- Implement **responsive** UI for tablet device
- Significantly improved code flexibility by **refactoring hardcoded** product handling to a dynamic, enabling seamless addition of new products without code changes
- Multi-language for UI with different languages (Egyptian, Vietnamese, English,...)
- Successfully resolved API-related issues and defects, optimizing application stability
- Enhanced user experience by creating custom Angular directives and pipes for date pickers, input fields, and data formatting

**Hexagon Corporation**

**Nov 2024 - Now**

**Project:** Ngôi Nhà Hùng Hậu – Internal HRM & Content Management Platform

**Team size:** 4

**Responsibility:** Full-Stack Developer

**Tech stack:** Next.js, Reactjs, TypeScript, Node.js, MySQL, Redis, Socket.IO, AWS S3,

TailwindCSS, TanStack Query (@tanstack/react-query), MSAL (Azure AD)

- Developed a full-stack internal HRM platform for employee management and internal content publishing using **Next.js** (App Router & API Routes) and Node.js.

- Implemented **user and personnel management features**:
  - JWT-based authentication
  - Role-Based Access Control (Admin / Manager / Member)
- Built an **internal post & announcement management system** for admin and communications teams
- Implemented **real-time features** (non-chat) using **Socket.IO**:
  - Live post status changes, edits, comments, and reactions
  - Real-time reaction count synchronization
- **Lazy-loading** for high-volume content. Implemented an automated internal news aggregation system
- **Performance & Rendering Optimization**:
  - Mitigated hydration mismatch issues by implementing mounted gates, loading states, and dynamic imports (ssr: false) for heavy DOM-dependent components like TinyMCE.
  - Optimized data loading using a tailored TanStack Query caching strategy (staleTime: 30s, query retries, and manual mutation-based invalidations) to prevent redundant API overhead.
  - Leveraged SSR **caching** and revalidation policies (next.revalidate at 300s) on high-traffic, data-heavy pages to improve TTFB (Time to First Byte) under peak user loads.
- Improved backend **performance** and **scalability**:
  - Optimized database queries with composite indexes
  - Applied Redis for caching and API rate limiting.
- Designed system observability and reliability features:
  - Comprehensive audit logging for HR and admin actions
  - API request/response logging with correlation IDs
  - Centralized error handling and middleware pipeline.

## Project: myU – E-commerce Platform (Web & Mobile)

**Team size:** 5

**Responsibility:** Full-Stack Developer

**Tech stack:** Flutter (Dart), Node.js (Koa), Edge.js (SSR), Tailwind CSS, Redis, MySQL, REST APIs

**Platforms:** iOS, Android, Web

- Developed a cross-platform mobile app using Flutter with full checkout, cart management, and order workflows
- Integrated multiple e-wallets (**MoMo, ZaloPay, VNPAY**) and third-party logistics (**GHN**) via APIs and Webhooks.
- Built server-side rendered (SSR) web application using: **Edge.js** templating, **Tailwind CSS**, **Koa framework (Node.js)** for backend routing and rendering.
- Implemented a secure identity flow: Token-based authentication, mandatory phone binding, and OTP verification via Zalo ZNS and SMS (PAVietnam).
- Used Redis to manage temporary and high-frequency data: access tokens, OTP codes (SMS / ZNS)
- Implemented a comprehensive logging & monitoring system, including: API logs, Audit logs, Login token logs, Transaction logs, correlation ID
- Managed mobile app deployment and release processes for both iOS and Android, ensuring stable builds and production readiness.

## EDUCATION & CERTIFICATIONS

**Bachelor Software Engineer at University of Information Technology**

**2018-2023**

Majors: Software Engineering
